

In order to further spread the tradition of unity on Texas A&M's campus, BUILD 2016 will begin Phase 3 of the Texas Aggie Medical Clinic project. Constructed using donated shipping containers, the clinics are a habitable envelope built by students within the metal container. The converted medical clinics will be transported to international or domestic locations in medical need. A strong partnership with various companies allow us to construct and export these units as well. The units will be self-contained and ready to operate anywhere in the world, providing an important source for medical relief in underdeveloped areas.

2013
